policy**

**02114 - Bulkhead -corrosion**

Description

**The company should establish procedures to ensure that the ship is maintained in conformity with the provisions of the relevant rules and regulations and with any additional requirements which may be established by the company. In meeting these requirements, the company should ensure that: any non-conformity is reported, with its possible cause, if known. PSCO's observed a hole due to excessive corrosion on the port side bulkhead of cargo hold number 2 on frame #45, above the waterline. It was determined that the master was aware of the damage but failed to report the non-conformity in accordance with the ship's Safety Management System. An ISM audit of the vessel SMS is required before departure.**

**In the circumstances given in paragraph (b) or where a certificate has expired or ceased to be valid, the officer carrying out the control shall take steps to ensure that the ship shall not sail until it can proceed to sea or leave the port for the purpose of proceeding to the appropriate repair yard without danger to the ship or persons on board. PSCOs observed a hole due to excessive corrosion on the port side bulkhead of cargo hold number 2 on frame #45, above the waterline. Because the condition of the cargo hold is not maintained to the provisions of the present regulations as provided in the SOLAS Cargo Ship Safety construction certificate, it ceases to be valid.**
